Examiner's Reason for Allowance

1. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach an ejection apparatus of an injection molding machine having an electrically powered ejector drive for moving an ejector plate relative to the mold surface, the electric motor having a rotatable output shaft, at least one ejector rod extending from and connected with the ejector plate for movement and slidably supported in a movable platen that carries one of the mold members, a knock-out bar for moving the ejector rods, the ejector rods are slidably carried by the knock-out bar for limited movement, a spring positioned between each ejector rod and the knock-out bar, the springs being compressed by over-travel of the knock-out bar in a direction away from the mold member, a cam member connected with the motor output shaft and a cam follower operatively coupled with the knock-out bar, such that the cam follower interacts with the cam member to convert rotation of motor drive shaft to linear movement of the ejector plate toward and away from the molding surface when the motor is rotated in only one direction of rotation. The closest prior art, Stehr, Rees and Kamiguchi, fails to teach the combination of the elements with the spring. Specifically, the relation between the spring, movable platen, motor output shaft and cam member. The prior art of reference do not teach the combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
